

MoveStackController
::MoveStackController

StateManagerController
::StateManagerController

MoveStackModel::totalMoves
Changed

```
graph LR; A[MoveStackController::MoveStackController] --> C[MoveStackModel::totalMoves Changed]; B[StateManagerController::StateManagerController] --> C;
```

The diagram illustrates a state change event in a software application. On the left, two controller objects are shown: 'MoveStackController::MoveStackController' and 'StateManagerController::StateManagerController'. Both controllers have arrows pointing to a single target box on the right. This target box, which has a gray background, contains the text 'MoveStackModel::totalMoves Changed', indicating that the total number of moves in the MoveStackModel has been updated.
